To,

Mr. Hans-Martin Rieser

DLR German-Aerospace-Center

Ulm, Germany.

Subject: Application — Student Assistant (Vacancy-ID 4237), Cooperative 1:10 Vehicle Demonstrator (Ulm).

Dear Mr. Rieser,

I am applying for the Student Assistant position (Vacancy-ID 4237) at DLR in Ulm, focused on developing a small-scale cooperative vehicle demonstrator. As a Master's student in Autonomy Technologies at FAU, I am motivated by hands-on development that brings together software, system integration, testing, and structured documentation—especially in safety- and reliability-oriented environments.

In my recent engineering roles, I have worked extensively with Python-based processing and validation pipelines as well as robotics software development. As a Student Research Assistant at FAU, I develop and maintain data analysis pipelines, implement automated evaluation scripts, and document experiments in a structured and reproducible way. This background aligns well with your expectation of clear, formal documentation of designs, procedures, and tests.

Previously, during my Systems Engineer internship, I developed robotics software using ROS2 (Python/C++) and Gazebo simulation, designed and validated kinematic models for a 5-DOF robotic arm, and performed systematic testing and performance evaluation. This experience trained me to think in terms of end-to-end system behaviour: interface definition, debugging, and validation—capabilities I can bring to implementing lightweight monitoring/control software and ensuring reliable behaviour in a multi-vehicle setup.

I am particularly interested in your demonstrator's integration challenge, bringing electronics and software together in a constrained 1:10 platform and ultimately deploying a simple AI driver to showcase cooperative scenarios such as platooning. I work comfortably in teams, communicate in English and German (A2), and I am prepared for on-site work in Ulm within the part-time scope of the position.

Thank you for considering my application. I would welcome the opportunity to discuss how my background fits your demonstrator project and how I can contribute quickly and reliably.

Sincerely,

Ganesh Reddy
